

REMARKS/ARGUMENTS

Applicants thank the Examiner for their careful review of this application. Claims 1, 3, 4, 6-8 and 10-20 have been rejected. Claims 1 has been amended to overcome the Examiner's informality objections. It is respectfully submitted that the pending claims define allowable subject matter. Applicants respectfully request reconsideration of the application in view of the above amendments and the following remarks submitted in support thereof.

Discussion of Objection to Claim 1

In Section 5, of the Office Action, the Examiner objected to Claim 1 because of the following informalities: "using data stored in a repository" is considered to read as "using data stored in a system repository" in view of Claim 1, line 16; and the phrase "the abstract persistence physical schema capable of being" is considered redundant.

As requested by the Examiner, Applicants have amended Claim 1 to correct the antecedent form of the phrase "using data stored in a repository." As further requested by the Examiner, Applicants have amended Claim 1 to remove the phrase "the abstract persistence physical schema capable of being."

Applicants have complied with the Examiner's request and believe that the objections are overcome.

Discussion of Rejection of Claims 1, 3-4, 6-8 and 10-20 under 35 U.S.C. § 103(a)

In Section 8 of the Office Action, the Examiner rejected Claims 1, 3-4, 6-8 and 10-20 under 35 U.S.C. § 103(a) as being unpatentable over U.S. Pat. No. 6,298,478 to Nally et al. in view of "Enterprise JavaBeans Specification, V1.1" to Sun Microsystems.

The Examiner's rejection is respectfully traversed. First, contrary to the Examiner's assertion, Nally et al. does not disclose a *state of the original entity bean being associated with one or more fields defined by an abstract schema* as recited in Claims 1, 8, and 15. Citing to column 14, lines 21-31 and column 14, lines 51-61 of Nally et al., the Examiner attempts to support its assertion by stating that Nally et al. disclose "the state of the original entity bean being associated with one or more fields." Specifically, the Examiner asserts that the *state* discussed in Nally et al. can be one of "new," "old," "delete: Yes/No," or "modified: Yes/No" and such information is equivalent to the *state* recited in Claims 1, 8, and 15. Applicants respectfully disagree.

The *state* discussed in Nally et al. is wholly unrelated to the *state of the original entity bean* which, as recited in Claim 1, is *associated with one or more fields defined by an abstract schema*. The only *state* disclosed in Nally et al. relates to version status 530 that includes information indicating whether an Enterprise Java Bean (EJB) was newly created ("state=new") or read from a database or data store ("state-old"). See Nally et al. at column 14:21-33; column 14:51-61. Applicants also respectfully note that contrary to the Examiner's statement, Nally et al. does not include "delete" and "modified" amongst the two states discussed above. Rather Nally et al. merely disclose that version status information 530 can also include information regarding whether an EJB version is marked for deletion ("delete=[yes|no]") or whether the instance data for an EJB version has changed ("modified=no") or not changed ("modified=no"). *Id.* In other words, the *state* disclosed in Nally et al. merely refers to whether an EJB is newly created or whether the EJB was previously created and was therefore copied from a database or data store. Nally et al. does not refer to a *state of the original entity bean being associated with one or more fields defined by an abstract schema* as recited in Claims 1, 8, and 15. Applicant's respectfully point out to

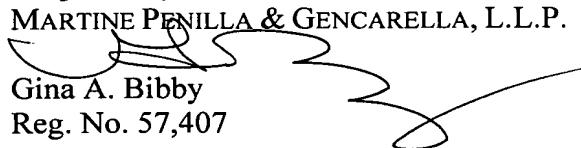

the Examiner that the Federal Circuit cautioned, in its overruling of a United States Patent and Trademark Office holding that certain claims were unpatentable under 103(a), that statements made in a prior art reference “**... cannot be viewed in the abstract[,] ... [r]ather they must be considered in the context of the teaching of the entire reference.**” See In re Kotzab, 55 USPQ2d 1313, 1317 (Fed.Cir. 2000) (emphasis added). Here, the Examiner has not properly considered the meaning of the term *state* in the context of the teachings of Nally et al.

Second, neither Nally et al. nor Enterprise JavaBeans Specification, V1.1” teach or suggest *transferring the state stored in the original state object to the upgraded state object without disrupting the operation of the JAVA module* as recited in independent Claims 1, 8, and 15. The Examiner cites FIG. 4, column 14, lines 2-12, and column 13, lines 29-44 of Nally et al. to support an assertion that Nally et al. disclose transferring the state stored in the original state object to the upgraded state object. The Examiner further cites column 14, lines 21-39 of Nally et al. to support an assertion that Nally et al. disclose the original state object is upgraded in the JAVA module. Applicants respectfully disagree with the Examiner’s assertions. All that the citations provided by the Examiner disclose is a transaction management approach in a enterprise environment in which multiple concurrent and/or nested transactions have simultaneous access to an EJB. The teachings of Nally et al. do not disclose performing real time modification to the managed state of a Java-based application with run time object modification and generation, as recited in claimed invention. Enterprise JavaBeans Specification, V1.1 also does not teach these missing elements. Rather all that Enterprise JavaBeans Specification, V1.1 discloses is a specification of the basic EJB architecture.

The foregoing demonstrates that the cited primary references of Nally et al. and Enterprise JavaBeans Specification, V1.1 do not teach each and every element of independent Claims 1, 8, and 15. Consequently, independent Claims 1, 8, and 15 and claims 3-4, 6-7, 10-14, and 16-20, which respectively depend therefrom, are patentable under 35 U.S.C. § 103(a) over Nally et al. in view of Enterprise JavaBeans Specification, V1.1. Applicants therefore respectfully request reconsideration, and withdrawal of the § 103 rejections.

Conclusion

In view of the foregoing, the Applicant respectfully submits that all the pending Claims 1, 3, 4, 6-8 and 10-20 are in condition for allowance. Accordingly, a Notice of Allowance is respectfully requested. If the Examiner has any questions concerning the present amendment, the Examiner is requested to contact the undersigned at (408) 749-6920. If any additional fees are due in connection with filing this amendment, the Commissioner is also authorized to charge Deposit Account No. 50-0805 (Order No. SUNMP007). A duplicate copy of the transmittal is enclosed for this purpose.

Respectfully submitted,
